

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Molekularne metode v botaniki
Course title:	Molecular methods in botany

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Ekologija z naravovarstvom, 1. stopnje		2. in 3.	3. ali 4 ali 5. ali 6.
Ecology with nature protection, 1.st degree		2nd or 3rd	3rd or 4th or 5th or 6th

Vrsta predmeta / Course type	Izbirni/Elective
------------------------------	------------------

Univerzitetna koda predmeta / University course code:	
-------------------------------------------------------	--

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
7	8	30			135	6

Nosilec predmeta / Lecturer:	Nataša PIPENBAHER
------------------------------	-------------------

Jeziki / Languages:	Predavanja / Lectures: Slovenski/Slovenian
	Vaje / Tutorial: Slovenski/Slovenian

**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Jih ni.

None.

Vsebina: _____ **Content (Syllabus outline):** _____

<ul style="list-style-type: none"> - Organizacija in ekspresija rastlinskega genoma. Analize genov in rekombinantne DNK tehnike pri rastlinah - Primarni in sekundarni rastlinski metaboliti. Primarni metaboliti: ogljikovi hidrati, lipidi, sprejem dušika, sinteza aminokislin in proteinov. - Sekundarni metaboliti: fenoli, alkaloidi, glikozidi - Genske mutacije rastlin (pomen, fenotipski učinki, vzroki mutacij) - Delovanje in kinetika rastlinskih encimov - Molekularni odzivi rastlin na abiotiske in biotske dejavnike - Povezave med molekularno populacijsko genetiko in filogenijo - Fenotip kot rezultat interakcij med genotipom in okoljem - Genski markerji: metode vrednotenja polimorfizmov in uporaba genskih markerjev za DNA fingerprinting, vrednotenje genske raznolikosti (PCR, RFLP, AFLP, kromatografije) 	<ul style="list-style-type: none"> - Organization and expression of plant genome, Analysis of gen in recombinant DNA techniques in plants - Primary and secondary plant metabolites Primary metabolites: carbohydrate, lipids, accumulation of nitrogen, synthesis of nucleic acid and proteins Secondary metabolites: alkaloids, phenols, glycosides - Mutations in plants (importance, phenotype expression, causes of mutation) - Activity and kinetics of plant enzyme - Molecular reaction of plant on abiotic and biotic responses - The link between molecular population genetics and phylogeny - Phenotype as the results of the interactions between the genotype and environment - Genetic markers: method of polymorphism and use of genetic markers for DNA fingerprinting, evaluation of genetic differences (PCR, AFLP, RFLP, chromatography)
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Cilji in kompetence:

Objectives and competences:

<ul style="list-style-type: none"> - Študentje razlikujejo različne molekularne metode - Študentje primerjajo različne genetske mutacije na rastlinah - Študentje uporabljajo različne molekularne metode v botaniki - Študentje povezujejo molekularno znanje z naravovarstvenim 	<ul style="list-style-type: none"> - Students compare different molecular methods - Students compere different gene mutations for plants - Students use different molecular method in botany - Students connect molecular knowledge with natural conservation
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Predvideni študijski rezultati:

Znanje in razumevanje:

- Študentje uporabljajo in analizirajo različne molekularne metode v botaniki
- Študentje konstruirajo poskuse na molekularnem nivoju
- Študentje so sposobni prepoznati genske mutacije za rastline
- Študentje aplicirajo molekularno znanje na naravovarstveno problematiko

Prenesljive/ključne spretnosti in drugi atributi:

- Študentje poznajo molekularne metode v botaniki

Intended learning outcomes:

Knowledge and understanding:

- Students use and analyze various molecular method in botany
- Students construct their own experiment on molecular level
- Student are able to recognize gene mutations for plants
- Students apply molecular knowledge to nature conservation issues

Transferable/Key Skills and other attributes:

- students know molecular method in botany

Metode poučevanja in učenja:

- Predavanja
- Seminarji
- Laboratorijske vaje

Learning and teaching methods:

- Lectures
- Seminars
- Laboratory exercises

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Opravljena seminarska z zagovorom	100	Completed seminar with defense
-----------------------------------	-----	--------------------------------
