Vsebina:

Ena največjih kriz, s katerimi se spopada človeštvo, je biodiverzitetna kriza. Naravovarstvo je utemeljeno s paradigmami varstvene biologije, z zakonodajo in je velikokrat temelj lokalnih, regionalnih in nacionalnih družbenih razvojnih priložnosti. Načini varstva narave so zelo različni in obsegajo delo državnih služb, nevladnih organizacij in posameznikov. Obstajajo nacionalni in mednarodni instrumenti varstva

Content (Syllabus outline):

One of the biggest recognized crisis on the World is biodiversity loss. Nature conservation is founded in paradigms of conservation biology and in the legislation. It is often the basis for local, regional and national development perspectives. Methods in nature conservation are diverse and include the efforts of public services, NGO's and individuals. There are numerous national and international instruments, e.g. Red lists, conventions,

narave (Rdeči seznam, konvencije, nacionalna in druga zakonodaja...). Varstvo narave je krizna disciplina, zato je posebej pomembna njena učinkovitost. Obstaja velik razkorak med »teoretičnim varstvom« na papirju (v konvencijah, namerah, zakonodaji) in manifestiranim (implementacija zakonodaje, izboljšanje stanja na terenu, renaturacije...). Družbeni pomen varstva narave je predvsem v ohranjanju ekosistemskih storitev, od katerih je neposredno odvisno tudi človeštvo. Eno pomembnejših orodij varstva narave danes so naravni rezervati. Rezervate vzpostavljam z namenom, da ohranimo diverzitet bioloških komponent in ekoloških procesov, ki bi jih zaradi degradacije izgubili. Rezervati imajo tudi pomembno izobraževalno vlogo in služijo kot primeri trajnostnega razvoja, pri čemer je trajnostni razvoj treba obravnavati na ekološkem, ekonomskem in socialnem nivoju. Rezervati prispevajo k ohranjanju ekosistemskih storitev, brez katerih bi človeška družba čutila velike posledice. Zato je pomembno kako izbiramo rezervatne površine in kako z njimi upravljam. Učinkovitost rezervata je odvisna najmanj od petih kritičnih dejavnikov – velikosti rezervata, raznovrstnosti in dinamike, krajinskega konteksta, pufrskih pasov in koridorjev. Velikokrat je pred vzpostavljanjem rezervata treba najprej izvesti restavriranje, torej ponovno vzpostaviti prvotno stanje. Trajnostno upravljanje z rezervati zagotavljamo na različne načine, trend novejše generacije rezervatov je v njihovi multipli rabi in integraciji, pri čemer so bistvenega pomena znanstvene/strokovne podlage, jasni cilji in v primeru različnih rab (npr. varstvo, turizem, kmetijstvo...) njihova uravnoteženost v smeri doseganja ciljev rezervata.

legislation... Nature conservation is a crisis discipline where its efficiency is of crucial importance. Discrepancy is evident between theoretical conservation on the paper and its manifestation in the field. Humankind depends to a very large extent on ecosystem services - their preservation is one of the major public benefits of nature conservation. Creation of nature reserves is nowadays one of the most important nature conservation tools. Reserves are established to preserve the diversity of biological components and ecological processes that would otherwise be lost due to degradation. Furthermore, reserves have an important role in public education and they serve as examples of sustainable development at the ecological, economic and social level. Reserves contribute to preservation of ecosystem services that are dramatically important for the society, too. Therefore selection of appropriate areas and their management are among the most important questions in the process of establishment and management of the reserves. Effectiveness of the reserve depends upon five factors – its size, heterogeneity and dynamics, landscape context, buffers, and corridors. Previous to establishment, restoration must often take place at the area. Sustainable management in the reserves can be assured by its multiple-use (e.g. conservation, tourism, farming practices etc.) but it should be science-based, clear aim-oriented and well balanced.

Cilji in kompetence:

Študentje spoznajo mehanizme in načine za učinkovito varstvo narave na lokalnem, regionalnem, nacionalnem in globalnem nivoju. Seznanijo se s pomenom strokovnega in znanstvenega dela v varstvu narave (pomen podatkov za odločanje, monitoringa). Spoznajo, zakaj je varstvo narave pomembno za družbeni razvoj z ekološkega, ekonomskega in socialno-političnega področja. Razumejo potrebo kompleksnega pristopa pri vzpostavljanju in upravljanju z naravnimi rezervati.

Objectives and competences:

Students become aware of mechanisms and methods for successful nature conservation at the local, regional, national and international scale. They recognize the need of expert and scientific based approach in nature conservation and become aware of the importance of nature-conservation from ecological, socio-political and economical perspective. They understand the importance of complex approach in establishing and managing nature reserves.

Predvideni študijski rezultati:

Študentje (se) bodo:

- Spoznali kratko zgodovino varstva narave pri nas in v svetu.
- Seznanili s primeri učinkovitih naravovarstvenih praks na različnih nivojih pri nas in v tujini (zavarovana območja, njihovo upravljanje, vključevanje javnosti).
- Spoznali pomen družbene odgovornosti in prostovoljstva ter vloge posameznika v varstvu narave.
- Spoznali povezanost varstva narave in ohranjanja ekosistemskih storitev.
- Spoznali največje dejavnike ogrožanja narave in biodiverzitete na globalnem nivoju in pri nas (globalno segrevanje, int. kmetijstvo, netrajnostni posegi, deforestacija) ter mehanizme ukrepanja za njihovo preprečevanje oz. omilitev (denimo Program razvoja podeželja, kmetijsko – okoljski ukrepi...).

Intended learning outcomes:

Students will:

- acquire knowledge of history of nature conservation in Slovenia and in the World
- become familiar with examples of efficient nature-conservation at different levels in SLO and abroad
- become aware of the role of public responsibility and of individuals in nature conservation
- understand the connection between nature conservation and protection of ecosystem services
- recognize factors with largest negative effect on nature and biodiversity globally (global warming, intensive agriculture, unsustainable activities, deforestation) and mechanisms to prevent or mitigate their effects (e.g. Rural development programme, agri-environmental schemes...)
- become familiar with the work of
