Vsebina:

Content (Syllabus outline):

Definicija kompleksnosti kot vmesno stanje med redom in neredom. Enostavnost na subatomskem nivoju in kompleksnost na makroskopski skali. Naključje na mikroskopski skali in determinizem na makroskopski skali. Vzroki skalnega obnašanja. DNK in kompleksnost živih bitij, nastanek vzorcev. Granularni sistemi kot modelni sistemi tekočih, trdnih in celo kristalnih stanj.

Kinetika bioloških sistemov:

- sistemi metabolizma in transporta (shrambni modeli, modeli biokemijskih reakcij, farmakokinetski modeli)
- modelni pristop h komplexnim biološkim procesom (modeli razmnoževanja in interakcij, modeli rasti in delitve, evolucijski modeli, modeli neuronskih procesov)
- difuzijski sistemi in oblikovanje vzorcev

Definition of complexity as a state between order and disorder. Simplicity on the subatomic scale and complexity on the macroscopic scale. Reasons behind scaling behaviour. DNA and complexity, onset of patterns in living creatures. Granular systems as model systems of fluids, solids and even crystal states.

The kinetics of biological systems:

- systems of metabolism and transport (compartmental analysis, models of biochemical reactions, pharmacokinetic models)
- model approaches to some complex biological processes (models of propagation and ecological interactions, models of growth and differentiation, models of evolution, models of neuronal processes)
- diffusion system and pattern growth
