

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet:	Uvod v plazmo
Course title:	Introduction to plasma

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
FIZIKA		1. ali .2	1. ali 2.
PHYSICS		1. or 2.	1. or 2.

Vrsta predmeta / Course type	Izbirni za modula Biofizika in Fizika
------------------------------	---------------------------------------

Univerzitetna koda predmeta / University course code:	
---	--

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Lab. vaje Laboratory work	Mentorstvo Mentorship	Samost. delo Individ. work	ECTS
10	5				165	6

Nosilec predmeta / Lecturer:	Uroš Cvelbar
------------------------------	--------------

Jeziki / Languages:	Predavanja / Lectures: slovenski/Slovenian in/and angleški s slovenskim prevodom/English with translation in Slovenian
Vaje / Tutorial:	

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Predznanje iz klasične in moderne fizike.	Prerequisites: Preknowledge of classical and modern physics.
---	---

Vsebina: Obravnavani bodo osnovni in aktualni primeri s področja fizike plazme. Predavanja bodo pokrivala področja raziskav osnovnih principov kot tudi področje aplikacij. Izbrane vsebine se bodo prilagajale področju znanstvenoraziskovalnega dela doktorskega študenta. Primeri vsebin: <i>Osnove fizike plazme in plazemske kemije</i> : plazme v naravi, v laboratoriju, v industriji, plazemske aplikacije, elementarni procesi nabitih delcev v plazmi, elementarni procesi vzbujenih molekul in atomov v plazmi, plazemska statistika in	Content (Syllabus outline): Underlying principles and recent advances in plasma physics will be studied. The lectures will cover research of basic principles and also of applications. Topics will be chosen in accordance with the candidate's research work. Examples of topics: <i>Fundamentals of plasma physics and plasma chemistry</i> : plasma in nature, in laboratory, and industry, plasma applications, elementary processes of charged species in plasma, elementary processes of excited molecules and atoms in plasma, plasma statistics and kinetics
--	---

kinetika nabitih delcev, kinetika vzbujenih delcev v plazmi, elektrostatika, elektrodinamika in tekočinska mehanika plazme; Fizika in inženiring električnih plinskih razelektritev (obločne razelektritve, neravnovesne hladne atmosferske plinske razelektritve, plazme v visokofrekvenčnih elektromagnetnih poljih, razelektritve v aerosolih, prašnih plazmah in tekočinah, plazme elektronskih snopov)	of charged particles, kinetics of excited particles in plasma, electrostatics, electrodynamics and fluid mechanics of plasma; <i>Physics and engineering of electric glow discharges</i> (arc discharges, nonequilibrium cold atmospheric pressure discharges, plasmas in high-frequency electromagnetic fields, discharges in aerosols, dusty plasmas and liquids, electron beam plasmas).
---	---

Cilji in kompetence:

Namen predmeta je študente usposobiti za raziskovalno delo na izbranem področju fizike plazme.

Objectives and competences:

The objective of this course is to teach students how to carry out research work on a selected field within plasma physics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Po zaključku tega predmeta bo študent zmožen:

- razumeti osnovne principe plazemske fizike,
- analizirati, vrednotiti in primerjati najnovejše raziskave na izbranem področju fizike plazme;
- uporabiti napredno fizikalno znanje in matematične metode na danem področju za analizo in vrednotenje fizikalnih pojavov v odvisnosti od

Intended learning outcomes:

Knowledge and understanding:

On completion of this course the student will be able to:

- to understand basic principles of plasma physics,
- analyse, evaluate and compare the latest research on a chosen field of plasma physics;
- use advanced physical knowledge and mathematical methods from a specific

<p>relevantnih fizikalnih parametrov in spremenljivk;</p> <ul style="list-style-type: none"> - prepoznati analogije med različnimi pojavi in jih uporabiti za obravnavo novih pojavov ter jih uporabiti. - <p>Prenesljive/ključne spremnosti in drugi atributi:</p> <ul style="list-style-type: none"> - <i>Spremnosti komuniciranja</i>: ustno in pisno izražanje pri predstavitvi izbrane teme. - <i>Uporaba informacijske tehnologije</i>: uporaba programskih orodij za modeliranje in obdelavo podatkov. - <i>Reševanje problemov</i>: prepoznavanje univerzalnosti, analogij in celosten pristop k reševanju problemov. 	<p>field for an analysis and evaluation of physical effects as a function of physical parameters and variables;</p> <ul style="list-style-type: none"> - recognise analogies among different effects and apply them to describe novel physical effects and apply them. <p>Transferable/Key Skills and other attributes:</p> <ul style="list-style-type: none"> - <i>Communication skills</i>: manner of expression at written and oral presentation of a chosen topic. - <i>Use of information technology</i>: use of software tools for modelling and data manipulation. - <i>Problem solving</i>: ability to recognize universalities, analogies, and global approach to solving problems.

Metode poučevanja in učenja:

Predavanja, seminarji, konzultacije, razlaga, razgovor, delo s tekstrom, metoda pisnih in grafičnih del, problemsko učenje, študija primera, raziskovalno učenje, uporaba programskih orodij.

Learning and teaching methods:

Lectures, seminars, tutorials, explanation, discussion, work with text, work with graphic elements, case study, problem based learning, inquiry based learning, use of software tools.
